About this Document

This document aims at explaining the installation procedures required to install this package successfully in T24.

Scope

The Scope of the document is to cover the release mechanism of the PRMT.

Terminology Used

Naming Standards for the components

System Requirements

The following are the pre-requisites for installing this package.

- 1) jBASE Release 5.0
- 2) T24 Release R10.00
- 3) T24 Desktop Client Version 1.5
- 4) Build Control Package

1. General Considerations

- 5) When transferring object code via FTP the transport method must be set to binary .
- 6) When transferring data libraries via FTP the transport method must be set to ASCII and the FTP client should be configured to preserve the case names of the source files.

2. Contents of the Package

The pack contains the following:

2.1 SOURCE CODES:

GIT.BP>GIT.TRANSPORT.RUN

2.2 INSERT FILES:

N/A

2.3 2.3 DATA RECORDS

N/A

3. Steps for Installing the Package

3.1 Pre-Installation steps

N/A

3.2 Installation steps

If the package has been delivered as a Build Control Unit, then

- 1) FTP **XIBC001-PACS00089591.20110719.tar.Z** pack onto
bnk/F.BCON.DATA/RELEASE directory and uncompress the tar pack.
- 2) Open a new record **XIBC001-PACS00089591.20110719** in BUILD.CONTROL, in
input mode.
- 3) Enter 'RELEASE' in ACTION Field

- 4) Enter the path where the package **XIBC001-PACS00089591.20110719** has been placed (i.e bnk/F.BCON.DATA/RELEASE)
- 5) Enter "BUILD.CONTROL" in OFS.SOURCE record.
- 6) Commit the record
- 7) Open the record in Verify mode
- 8) Press F5. Build Control will automatically release the programs, compile them.
- 9) After compiling, BUILD.CONTROL will raise a prompt to Sign Off and Sign ON again.
- 10) Sign Off from T24 and Log out of jBASE
- 11) Log back in, Sign into T24 and 'V'erify the same BUILD.CONTROL record.

3.3 Post-Installation steps

N/A

4. Configuring the System

N/A

5. Special Instructions (if any)

N/A
