Temenos T24™

T24™ GLOBUS INTERFACE TOOL

Installation Guide

Date	Version	Changes	By
2007-04-13	1.0	New	Temenos Client Services

About this Document

This document aims at explaining the installation procedures required to install this product successfully in T24.

Table of Content

System Requirements

The following are the system requirements necessary for install ation of the T24 Globus Interface Tool

- Temenos GLOBUS G12.2.31 or higher
- Build Control – T24 Non-core Package and Deployment Tool

General Considerations

- When transferring object code via FTP the transport method *must* be set to **binary**.
- When transferring data libraries via FTP the transport method *must* be set to **ASCII** and the FTP client should be configured to **preserve the case** names of the source files.

1. Getting Started

Contents of the package

The GIT package consists of

- GIT.BP with Object Codes and Insert files.

- TMNS000-DL.GITPACK.FINAL – Data Library for Data Records

- TMNS000-DL.GIT.FRONTEND.LIST – Versions, Enquiries and Help Text Menu Records

Before Installing GIT

- Create 2 directories in the name gd gitbin and gdgitlib in the home path of the area.

- Add "%HOME%/gdgitbin" in the PATH environmental variable.

- Add "%HOME%/gdgitlib" in the JBCOBJECTLIST environmental variable.

- Copy and unzip the pack TMNS000-BC.GIT.FULL.PACK.zip to the path **../F.BCON.DATA/RELEASE**

Installing the package – Automated (Using BUILD.CONTROL)

The package has been delivered as a Build Co ntrol Unit, Hence

- Open a new record TMNS000-BC.GIT.FULL.PACK in BUILD.CONTROL, in Input mode.

- Enter 'RELEASE' in ACTION Field

- Enter the path where the package TMNS000-BC.GIT.FULL.PACK has been placed (as in ../F.BCON.DATA/RELEASE)

- Enter BUILD.CONTROL in OFS.SOURCE record.

- Commit the record

- Open the record in Verify mode

- Press F5. Build Control will automatically release the Object Codes, restores the records and authorises them.

- Sign Out and Sign in again

- Again verify the Record.
